75-85 decibels when operating

**WATER USAGE**  
100-300liters/day

Our ProFlow® product line is our most popular attraction. The ProFlow® may be operated as a high capacity attraction during peak hours or offered to more experienced riders as a wider ride surface during slower times. During off hours, the wave may be used for corporate events, birthdays or private lessons, maximizing and diversifying your revenue streams.

Riders will feel safe with the padded, angled side bumper walls with a perimeter that lacks any hard 90° corners, minimizing the potential for injury. Additionally, we designed the recovery area to be so long that rear impacts are dramatically reduced. More efficient, safer and higher performance than any other comparable wave in the industry!
